

Control Panel 161-A-2324

(161-K-0006B installed)

(optional)

The **161-A-2324** panel is our most versatile way to control the pump. It includes a variable timer and low voltage control circuit. The timer can be set from under 1 minute to as much as 60hrs of run time. The factory setting is typically 10 minutes. The 24 VAC low voltage control circuit is intrinsically safe for the marina environment.

The panel is assembled in a UL licensed shop using all UL listed components. A UL listing for the complete panel is available.

Panel Includes:

- NEMA 4X Non Metallic Enclosure
- Motor Contactor handles up to 3hp @240V
- Multi Function Variable Run Timer .01 – 60hrs
- Industrial Transformer to 24VAC
- Single phase or three phase input available
- Two Primary Fuses at transformer
- One Secondary fuse
